

Post Lesson Observation Conference

How do you (the DSC student) feel the lesson went? I thought the lesson went well. The students were willing to explore and motivated to learn. The Prezi added value and interest to the lesson and made things easier for me in presenting and organizing the lesson.

I (the supervisor) thought the lesson was... excellent! You have given careful attention to planning and preparation.

What do you (the DSC student) think were the strongest and weakest parts of the lesson?

STRONG - Technology used as a teaching tool - plus your preparation was outstanding

WEAK - None noted

I (the supervisor) thought the strongest and weakest parts of the lesson were...

Strong - the lab exploration, organization, the tech component.

Weak - the lab worksheet I had prepared for journal

Setting goals: List up to three goals for future teaching, subject matter knowledge, or teaching disposition that you would like to work on: (DSC student writes these with possible suggestions from supervisor)

1. The lab worksheet assessment, assessment in general
2. Providing meaningful feedback to my students.
3. Providing meaningful feedback in a timely manner.

Additional questions: (if time allows)

In your own words what was the main concept and overall goal of your lesson?

What do you think the students knew about this concept before the lesson?

How many of the students do you think learned the concept and met your overall goal?

How do you know the students learned the concept?

If you taught the lesson again, is there anything you might do differently? If so, what would you do?

Additional notes (if needed):
