

32) An egg yolk is an example of

- A. a plant cell with cell walls.
- B. a Eubacterial cell with membrane bound organelles.
- C. a cell without organelles.
- D. a cell that can be seen without a microscope.

33) Active transport is the process in which

- A. particles move through a membrane from a region of high concentration to a region of low concentration without using energy.
- B. particles move through a membrane using energy from a region of high concentration to a region of low concentration
- C. particles move through a membrane using energy from a region of low concentration to a region of high concentration.
- D. particles move through a membrane from a region of low concentration to a region of high concentration without using energy.
